

PRESS RELEASE, September 22nd, 2025

SMARTER, STRONGER, GREENER: THE NEW SPX532.2 HAS ARRIVED

At GIS it will take the spotlight. After its preview at Bauma 2025, the brand-new Jekko **SPX532.2** will make its official debut at **GIS - Giornate Italiane del Sollevamento**. The first units are already hard at work on job sites around the world.

The SPX532.2 is the evolution of the best-selling SPX532, a mini crane with a **3.2-ton lifting capacity** and a maximum height of **17 meters**. It is available in two versions: **lithium battery or bi-energy Diesel** with electric powerpack.

Developed through close market observation and continuous customer feedback, this new model introduces several major innovations designed to boost **versatility and ease of use**.

Stability & Performance

The SPX532.2 features a **brand-new stability system** - upgraded on the mechanical, hydraulic, and software levels - which, combined with optimized weight distribution, ensures **excellent lifting performance even in reduced stability conditions**.

The outriggers offer **9 different rotation positions**, which can also be used in asymmetrical configurations to adapt to the most complex and hard-to-reach job sites. Everything is

integrated with an advanced auto-leveling system, designed to simplify operations even for less experienced operators.

With a width of just **760 mm**, the SPX532.2 sets new standards for accessibility: highly maneuverable and compact, it can easily pass through narrow spaces, even a **single doorway**.

Energy Efficiency

Efficiency has also taken a big step forward. Both the battery-powered and Diesel versions are equipped with a new **variable-speed engine**, which significantly extends battery autonomy (up to +30%) or reduces fuel consumption, depending on the configuration.

The engine also ensures lower noise levels and **faster, more responsive crane movements** (+15% speed increase).

Advanced user experience

Operator experience has been a key focus. Jekko continues to expand the intuitive interface – first introduced with the SPX328 and finalist at the **UX Design Award** – across its latest models.

The onboard **7" IP66 touchscreen display** provides real-time, comprehensive operational and diagnostic information. Navigation is simple and intuitive, with built-in interactive assistance guiding operators during use. Self-diagnosis and troubleshooting functions ensure quick maintenance and minimize downtime.

Completing the package is the brand-new **radio remote control**, offering intuitive and complete management of all crane functions.

Configurable for Every Job

The SPX532.2 can be equipped with a wide range of accessories and attachments to build the perfect crane for any application. Options include hook or winch lifting with different winch options, pulley blocks, hydraulic jib or runner jib, glass manipulators, pipe and beam grabbers, and lifting beams. Tracks can be customized too, with standard outdoor or non-marking indoor versions.

These and many other accessories turn the SPX532.2 into a tailor-made solution, adaptable to countless environments and job requirements.
